

September 2018

The Entomology section of the Lee Kong Chian Natural History Museum, National University of Singapore (NUS) has been using insect drawers, purchased from Pracownia Stolarska Marek Majkowski, over the past three years for the museum's main insect collection.

We have been very pleased with the quality of the insect drawers, as they are lightweight, which makes movement of both drawers and specimens easier. More importantly, the lids shut tightly on the drawers, which provides good protection against climate variations and pests.

The company has provided competitive prices for its superb quality drawers, and have manufactured them to meet the exact specifications. Overall, the service provided has been excellent and comprehensive, and I do recommend this company to both research institutions and natural history museums.

Yours Sincerely,

Mr. Foo Maosheng
Scientific Officer
Entomologist and Curator of Cryogenic Collection
Lee Kong Chian Natural History Museum
Singapore
